Inventor: Abram Ellison
Name of Invention: Perpetual motion energy
Application/ Control Number: 10/772,346
Examiner: Yahveh Comas
Art Unit: 2834
May 14, 2006

Cross-reference to related Application

The present application is based on:
Patent No 6,664,475 B1, issued on December 16, 2003
Primary Examiner Chau N. Nguyen
Application 10/337,839, filed on January 8, 2004

**In Response To Advisory Action
Before the Filing of an Appeal**

Remarks

Applicant agrees with the examiners contention that the invention does not produce perpetual motion.

The New Claims in All Electric Battery Driven Vehicle 10/772,346 are distinguish from Gaul U.S. Patent No. 3609426 and Armfield U.S. Patent NO. 4095665. by a Electric Wire Distributor Connector which distributes electric energy to a electric motor which propells a electric car and also rotates a generator; which charges one or more batteries; and also simultaneously recharge one or more batteries.

How new Claims Overcome Final rejection:

Applicant has ammended the claims by canceling claims 1 to 10 and substituting new Claims 11 to 18.

New Claims:

1. Applicant deleated perpetual motion energy in Claim 11 and inserted A all electric, battery driven vehicle.
2. Applicant deleated one hundred percent or more, and perpetual motion energy in Claim 15.
3. In Claim 18 Applicant deleated perpetual motion energy and inserting powering electric cars or vehicles.
